

Booking Request and Shipping Instructions

Much more than just **electronic submission** for **booking requests** and **shipping instructions**, **IN-TOOL** has inbuilt **data validation, review and amend**, automatic addition of **relevant codes** for carriers, vessels, ports or locations and container types, providing a true 'bridge' between freight forwarding systems and The Ocean Carrier.

Integration

Full Integration

IN-TOOL is linked with the client's freight ERP system database, enabling direct import of job data from the appropriate fields in the client system.

Linked Module

The client freight system outputs a flat file (ideally .txt) directly to a specific folder which **IN-TOOL** (installed on a server or local machine) regularly polls and picks up the files for processing. The user will receive an email detailing amendments, allowing them to correct the record in their freight system and resubmit the shipping instruction.

Doc2Data

The user prints the job to the Doc2Data Printer Driver (installed on each user's PC) which then creates a digital image for OCR scanning and the resulting data is populated into the relevant fields in **IN-TOOL** for processing.

Incoterms

Many forwarders use Incoterms to determine who is responsible for costs and liabilities. **IN-TOOL** provides a 'translation' of Incoterms to the carriers charge details. The user can manually create their own Incoterms profiles, which can be amended or updated whenever required.

Automated Manifest System (AMS)

AMS information can be added to jobs and emailed in a PDF format, along with a copy of the shipping instructions, directly to the respective carrier's AMS processing department or, where appropriate, to their authorised agent or broker.

Whilst the systems of many of the carriers do not currently accept EDI input of AMS data we believe that it is a development planned for the near future. As such, once this system is available, **IN-TOOL** will use electronic submission in a similar EDI file format to the existing Shipping Instructions function.

Last Word

Because of its labour and cost saving features, **IN-TOOL** is provided as a SAAS tool. To find out more, click on the key features button, look through the screenshots above or give us a call.

Main Features

- ✓ Desktop or Server versions
- ✓ Integrated, EDI and Doc2Data OCR import options
- ✓ Integrated version has bi-directional data flow
- ✓ Integrates with our own FASTFREIGHT
- ✓ Timed polling for server versions
- ✓ Runs in the background
- ✓ Flexible enough to work with practically any system
- ✓ Can be used as a standalone system
- ✓ Comprehensive, configurable code database
- ✓ Configurable Incoterms
- ✓ Dangerous goods section
- ✓ Validates data on transmit
- ✓ Review and amend feature
- ✓ Error highlighting for quick correction
- ✓ Transmission history
- ✓ Direct submission to the carriers via an e-commerce portal
- ✓ SIs, Booking Requests and AMS
- ✓ Speedier return of draft Bill of Lading from carriers
- ✓ Carrier documentation charges may be reduced or removed entirely
- ✓ Removes need to re-enter job details
- ✓ Minimises human error
- ✓ Free installation and use in most cases
- ✓ 'At Source' inbuilt data validation saves time

Made for You

- ✓ Full installation
- ✓ Full training
- ✓ Initial OCR Document Mapping
- ✓ Talk to us if you have a special request, we may be able to help

Additional Cost Options

- ✓ FASTFREIGHT freight forwarding software
- ✓ Order management online
- ✓ IN-TRACK - Status tracking with email update alerts for key stakeholders as SAAS
